

AI Project Canvas

Title:

Data

Which data do you need?

ANWV Data: Safe driving, weather related data

Weather data: Real-time, openweather provided API

Time Data: Date, Holiday, Time

Skills

Which skills do you need for development?

Data Analysis
Machine Learning
Web Development
Project Management

Output

Which key metric are you optimizing for?

MAE: Optimizing for MAE ensures precision and accuracy. By focusing on MAE, we achieve an easily interpretable metric and minimize prediction errors.

Value Proposition

What is the value added by your project?

The app is meant to prevent traffic accidents under certain weather conditions and in areas where accidents often take place. It alerts the user for safer driving and external conditions that can effect them also.

Integration

How will the project be integrated?

Platform: Web-app, ideally smartphones

Tool: Proprietary device

Stakeholders

Who are the key stakeholders?

ANWB

Municipality of Breda

Commuters

Emergency services

Customers

Who are the end customers?

Commuters

City Planners

Emergency Services

Cost

What costs will the project incur?

Server: The project will need an active server to ost the web app and the model for the predictions

Data: The live weather API we need to make the predictions will require us to pay after the requests

Development: The project needs constant attention to keep running and keep the model accurate and up-to-date

Revenue

How will the project generate revenue?

Ads: The app shows ads. While using the app users will get ads from different companies and sources

Subscription model: The application will implement limitation to the free version. This way users wanting to use the additional functions will have to purchase the monthly subscription
